

ESTPLY MEETS ALL REQUIREMENTS OF REACH

ESTPLY meets all the set requirements of REACH.

ESTPLY is mainly a 'downstream-user' of chemicals and has taken the necessary steps to make sure that all our chemical suppliers are aware of the REACH requirements.

ESTPLY's main raw material (e.g. wood) is not included in REACH according to the current legislation and do not need to be registered. Other materials (e.g. liquid, glue, resin, hardener etc.), used as filler in plywood production, is included in REACH and it has been registered by the suppliers. ESTPLY keeps records of purchased materials that contain chemicals and carries out at least once a year an audit to make sure our suppliers meet all the set requirements of REACH.

ESTPLY plywood is not to be considered as 'substances' under REACH. Substances of very high concern, including PBT, are not present in plywood on a concentration level (>0,1 w-%) that would require communication to our customers or to ECHA.
